

RECOVERY OPTIONS

AUGUST 2019

Our commitment

Groupe Lacasse is committed to pursuing sustainable development practices. We are constantly looking for innovative ways to make our products and manufacturing processes more environmentally, socially, and economically sustainable, while maintaining our ability to satisfy consumer demands for superior product quality and value.

Long-Lasting Furniture

At Groupe Lacasse, all of our products are built to last through time and repeated use. Through our Design for the Environment program, our team works hard in finding ways to expand the life cycle of our furniture, while guaranteeing their superior quality. We offer the possibility of replacing certain parts or components to extend the useful life cycle of the product.

Over the last several years, we have adopted a number of practices to ensure that our products meet the quality standards of our clients and are an example of sustainability. We design our furniture primarily of particleboard manufactured from 100% recycled post-industrial material, while a metal-on-metal assembly makes it easy to assemble/disassemble furniture, thus prolonging its useful life. To reduce landfill waste in the manufacturing of our products, we use sawdust for power cogeneration, and sort and recycle PVC plastic, steel, and aluminum.

For a customer wishing to recover a product, many options are available.

Recovery Options

Refurbish - It is easy to replace certain components or to integrate new products to your layout. Thus, it is possible to add items (computer/electrical accessories, tackboards, panels, etc.), or even to replace.

Reuse - The modularity of our furniture makes it easier to tailor our products to your changing environments. We also encourage our clients who have furniture in good condition to donate it to a local organization instead of getting rid of it.

Recycle - Products that cannot be refurbished or used can be recycled through appropriate recycling centers. Please check with your municipality to find out more.
